SANDEEP PUCHA

AI Full Stack Developer

Hyderabad, Telangana 500076 | 9182022463 |sandeepsai1509@gmail.com | Linkedin Profile

PROFESSIONAL SUMMARY.

Enthusiastic AI Full Stack Developer with 3+ years of experience in developing scalable and responsive web applications using modern technologies such as **React JS, Node.js, JavaScript, HTML5, and CSS3**. Skilled in building user-friendly frontend interfaces and developing **RESTful APIs using Express.js, Python, and Fast API**. Experienced in working with relational databases like **MySQL using ORM tools such as Sequelize. Hands-on experience in SharePoint SPFx development, cloud services including Amazon Web Services EC2, S3, and Lambda**, and integrating enterprise workflow solutions. Familiar with business automation tool like Power Automate. Builds Gen AI solutions with OpenAI and Claude, including LLM-powered automation, RAG and natural-language data querying, with a focus on reducing LLM cost. Claude Certified Developer. Strong problem-solving skills with a good understanding of Data Structures and Algorithms (Intermediate level).

EXPERIENCE

Associate Frontend Developer | ABSYZ Software Consulting Pvt. Ltd. (Sept 2023 – Present)

- Developed and maintained scalable enterprise web applications using **React, Node.js, Express.js, SPFx, and relational databases such as MySQL**.
- Designed and implemented workflow-based business applications to **automate approval processes**, **document management**, and employee operations for enterprise clients.
- Developed **dynamic threshold-based approval systems** and **role-based access control mechanisms to ensure secure and efficient workflow routing**.
- Implemented file upload, document processing, retrieval, and centralized document management functionalities with validations and access control.
- Improved application performance and scalability by implementing reusable components, pagination, optimized APIs, and efficient database operations.
- Integrated **SharePoint and Power Automate workflows** to streamline enterprise approval systems, document handling, and automated business processes.
- Developed and integrated RESTful APIs using **Express.js and Python, Fast API** for frontend-backend communication and enterprise application services.
- Implemented resume parsing, **JD matching**, recommendation systems, document parsing, and conversational query handling functionalities in AI-based applications.
- Enhanced chatbot response accuracy, backend processing, and policy retrieval mechanisms to improve conversational user experience.
- Collaborated with cross-functional teams in requirement gathering, workflow analysis, architecture discussions, development, testing, and deployment activities.
- Followed clean coding standards, scalable architecture practices, debugging, performance optimization, and secure development methodologies throughout the project lifecycle.

TECHNICAL SKILLS

- **Frontend Development:** React JS, HTML5, CSS3, Bootstrap, Material UI, SPFx
- **Backend Development:** Node JS, Express JS, Sequelize and TypeORM, SharePoint
- **Programming:** Proficient in Python, JavaScript, Google Apps Script
- **AI & Gen AI:** OpenAI API, Claude, LLMs, RAG, Prompt Engineering, Pydantic, Vector DB (Qdrant)
- **SQL:** Experienced in querying and manipulating data using SQL to extract and transform data from

databases efficiently.

- **Version Control & Collaboration:** Git, GitHub
- **Web Design & Development:** Web Development, REST API, JSON
- **Other Skills: AWS Basics, DSA Intermediate,** Power Automate, Salesforce (SOQL)
- **Tools**: Postman, VS Code, Cursor, Claude Code, MS Office Tools.

KEY PROJECTS:

Project #1: AI Profile Matching System

Client Industry: IT Services

Role: AI Full Stack Developer

Technologies: React.js, Fast API (Python), AI/LLMs, BM25, Google Drive API, PostgreSQL

Description: AI-Based Profile Matching System is an internal web application developed to help the Sales team quickly identify the most suitable employee profiles for client requirements. The system intelligently matches resumes with project requirements using AI-powered ranking algorithms and generates accurate match scores. It also enables AI-driven mock interviews and interview question generation to assess candidate readiness. The application reduces manual effort, improves profile selection accuracy, and accelerates the resource allocation process.

Project #2: AI SOQL Generator

Client Industry: IT Services (Salesforce)

Role: AI Full Stack Developer

Technologies: React (on Salesforce), Python, Fast API, OpenAI, Pydantic

Description: AI-powered natural-language-to-SOQL tool embedded directly in the Salesforce UI, letting users query org data in plain English without writing SOQL.

- Admin pipeline: the System Admin connects a Salesforce Sandbox URL and runs the pipeline, which discovers all objects in the org and builds a cached schema, Pydantic models and a parent-child relationship graph.
- User experience: users ask questions in plain English from the Salesforce UI and choose to either fetch the matching records directly from the org or just generate the SOQL query.
- Cost optimization: the cached schema and relationship graph keep LLM prompts small and targeted, cutting LLM cost from $0.10 to $0.0002–$0.0008 per action.

Project #3: Crack-It (AI Recruiting Platform)

Client Industry: IT Services

Role: AI Full Stack Developer

Technologies: React, Gen AI, RAG, OpenAI, Python Fast API

Description: Developed a secure web-based Resume Screening and Employee Shortlisting application designed to help Project Managers and Sales teams identify suitable employees against specific Job Descriptions (JD). The system analyzes and compares employee resumes stored in the database with the provided JD, generates

matching percentages, and provides intelligent suggestions for candidate shortlisting. The application streamlined the resource allocation process, reduced manual effort, and improved hiring and project staffing efficiency through automated resume analysis and recommendation features.

- AI interview assistant: when a candidate's resume is uploaded, the AI generates relevant, resume-specific interview questions for Round 1.
- Real-time follow-ups: during Round 2, the AI generates follow-up questions on the fly based on the candidate's answers, displayed on screen for the interviewer.

Project #4: Indent Approval Process

Client Industry: Hardware Manufacturing and Services

Role: Full Stack Developer

Technologies: React.js, SPFx (SharePoint Framework), SharePoint, Power Automate

Description: Developed and maintained an enterprise-level Indent Approval Process web application designed to automate and streamline cross-departmental approval workflows within the organization. The application enabled seamless collaboration between departments through workflow visibility, real-time approval tracking, centralized document management, and role-based access control. It improved operational efficiency by digitizing manual approval processes, reducing turnaround time, and enhancing transparency across the approval lifecycle.

Project #5: Design AI Automation

Client Industry: IT Services (Internal Design Team)

Role: Developer

Technologies: Google Apps Script, OpenAI API, Gmail, Trello, Google Chat, Google Sheets

Description: AI-driven automation that turns incoming design-team emails into assigned, tracked work with no manual triage.

- Polls the design team inbox every 5 minutes; for each new request, automatically creates a Trello ticket, posts an update to the Google Chat space and logs the details in a Google Sheet.
- Uses OpenAI to read the work described in the email and assign it to the right UI/UX designer based on their skills.
- Balances workload: when several designers share the required skill, the AI distributes tasks based on each person's current ticket count.

Project #6: E-Files Management System

Client Industry: Automobiles and Manufacturing

Role: Frontend Developer

Technologies: React.js, SPFx (SharePoint Framework), SharePoint, Power Automate

Description: EFiles Management System is a web-based application designed to efficiently manage employee-related documents within an organization. The system enables secure file upload, storage, retrieval, viewing, downloading, and deletion through a centralized document management process. It improves operational efficiency by reducing manual effort, enhancing document accessibility, and streamlining workflow management. The application also provides real-time notifications and user-friendly interfaces for seamless document handling and tracking.

CERTIFICATIONS

Claude Certified Developer – Anthropic | View Credential (Credly)

EDUCATION

BTech (Bachelor of Technology) in Electrical & Electronics (7.5 CGPA) **Graduation Year 2022**

Bharat Institute of Engineering and Technology, Ibrahimpatnam

Diploma in Electrical & Electronics (91.33%) **2016 - 2019**

Anurag College of Engineering, Ghatkesar

SSC High School (9.2 CGPA) **2015 - 2016**

Mother Meera High School, Moula-Ali
